CONSTELLATION MONOBLOC - FILL, WEIGH-CAP

Filling and Sealing of Vape Cartridges - Cannabis Industry

Some industries require extremely precise filling capabilities. BellatRx Constellation Monobloc uses unique liquid-filling technology to properly fill vials and tubes. Ideal for unstable microtubes, vials, and cartridges, the Constellation Monobloc uses **robotic pick and place stations** to unload vials from trays and reload the finished product back into trays.

The Constellation Monobloc will **pre-weigh, fill, post-weigh, cap, torque**, and **inspect** vials to ensure adherence to specifications. Subsequent labeling and laser etching of vials, as well as tray loading or cartoning, can be incorporated with the modular design of the Constellation system.

The video of Constellation Monobloc in operation shows a project we did to fill vape cartridges for a customer in the Cannabis industry.

AFTERMARKET SUPPORT - Augmented Reality Technology

We understand that, in manufacturing businesses, each minute counts. The use of Augmented Reality stands for fast and efficient service support. BellatRx customers can count on the STAR Kit to access technical support in real-time to diagnose and troubleshoot problems quickly.

Using AR technology allows you to:

- Have quick and real-time access to BellatRx experts
- Fast and efficient diagnose
- Reduce unexpected downtime

You can watch the video below and learn more about the benefits of having the STAR Kit in your business.

UPCOMING TRADESHOWS

Pack Expo International closed the season of events for 2022 with a golden key. It was a great event with over 44,000 people and 2,200 exhibitors.

We brought 10 machines distributed in two booths where we met customers, suppliers and potential partners.

We are now working on 2023 events and prepping great news to present to our visitors. You can follow our schedule on our [website](#).

INDUSTRIES WE SERVE

Proudly serving various industries, we design and manufacture liquid filling machines and monoblocks, solid-dose filling machines, cappers and torques, labelers, bottle unscramblers, banding and sleeving machines, conveyors, and accumulation and recovery systems focusing on [Rigid Containers](#).
