 COMPLETE LINE - LIQUID FILLING

If you are looking for a complete packaging line that can fill, cap, torque, and label a variety of bottles in a small footprint, you are at the right place. It is a project and a packaging line we developed and manufactured for one of our customers in the Household Products and Personal Care Industries. To meet this project's requirements we built an inline liquid filling system including a CPC high-speed capping machine, Notaris Wrap Labeler, and an inspection system. One of the main goals was to have a line that could fill and cap 5 different products, each one with different bottle sizes, shapes, and materials, plus its' respective caps, from regular threaded caps to caps with stems, pump and trigger caps, and sprays. Watch the video below to learn more about the project.

 COSMETICS AND PERSONAL CARE PACKAGING

Cosmetics and personal care products are characterized by the relatively high unit value and the innovative unique shapes of the containers. Innovative shapes and finishes for containers and caps often imply special considerations for automated packaging equipment. At BellatRx, we have developed unique features and technologies to handle scratch-prone caps, spray and pump caps, along with unique bottle shapes and geometries.
